Secure Azure

What is Secure Azure?

Secure Azure from Servent is a comprehensive set of security solutions. These solutions ensure that when you migrate workloads to Azure that they will be secured following Microsoft and industry standard best practices.

Why Azure?

Azure is a suite of cloud products and services which are all built from the ground up to address the most rigorous security and privacy demands. Azure provides the most comprehensive set of compliance offerings of any cloud service provider.

Secure Azure supplements native Azure security with third party solutions which provide enhanced security capabilities and additional controls.

Why Servent?

We help organisations across the globe in their journey to the cloud. Our track record and the customers we work with speaks for itself.

We are not only a Microsoft Gold Cloud Partner, we are also part of the Microsoft **Azure Advisors** community. We work with the Microsoft Product teams to shape Azure services. This gives us unparalleled access and insights to the Azure platform and the direction in which it is going.

The **Journey to a Modern Enterprise** is our proven approach to moving customers to Azure. **Secure Azure** is an offering which is part of this approach, built from many years' experience of moving customers to the cloud.

Moving applications and workloads to the cloud is a massive attraction for many organisations, primarily due to the favourable economics which the cloud offers, the ease of deployment, and the flexibility and scale that the cloud provides.

Microsoft Azure is a leader in the cloud space and continues to grow year-on-year in both general usage and with the new services that are introduced on a frequent basis.

Secure Azure from Servent solves perhaps the biggest challenge organisations face when operating in Azure, namely: security.

The three key pillars of the Servent **Secure Azure** offering are shown below.

Secured Identity
Securing your identity with identity management, MFA, RBAC and much more.

Secured Infrastructure
Securing critical cloud workloads using native Azure capabilities enhanced with third party offerings.

Secured Applications & Data
Securing what powers your business: applications and data.

Read on to understand how we can help secure your cloud presence by ensuring that your **identity**, **infrastructure**, **application and data** remain secure in the Azure cloud platform as part of your **Journey to a Modern Enterprise.**

Secured Identity

Identity is now widely considered as the new boundary for security, displacing the traditional network-centric view.

Because of this shift in mindset, **Secure Azure** provides guidance and implementation of the following solutions:

- IM best practices
- MFA & password management
- Role-based access controls
- Monitoring of suspicious activities
- Just-in-time access & approval process

Secured Infrastructure

Infrastructure is at the heart of Azure. This does not however mean that it will be the responsibility of Microsoft to secure. You will have a key role to play too. With **Secure Azure,** we implement the following solutions:

- Infrastructure design & controls
- Platform security
- Advanced threat management
- Resiliency

Secured Applications & Data

Applications and data are two fundamental components of any business. If you lost either then you would have no business. It's vital that applications and data are safeguarded and secure. With **Secure Azure**, we implement the following:

- Provide a highly available platform for your applications on Azure
- Safeguarding of cryptographic keys
- Backup and DR solutions
- Encryption data disks and storage
- Application and infrastructure level monitoring and alerting

Partner Solutions

We are proud to be a Barracuda Partner. The Barracuda offerings for Azure are the most mature in the marketplace and they have more NGFW and WAF deployments in Azure than any other Microsoft security partner. We believe that the Barracuda security products are the best-in-class security products to compliment **Secure Azure**.

Barracuda solutions consistently deliver total threat protection from zero-day, advanced malware, automated threats and other attacks.
